PwC Point of View published: ESG trends in the insurance sector – A 2050 perspective

Rising sea levels, frequent extreme weather events, and biodiversity loss are lasting consequences of climate change affecting the environment, society, and the economy.

Two key socio-economic meta trends stand out: the impact of global population changes on innovation and shifts in transportation and mobility. These trends will also influence the insurance sector. How will socio-economic changes shape insurance product design? Our recent PwC Point of View, "How Climate Change Affects Insurance: A 2050 Perspective," offers a comprehensive analysis of four key sectors: the energy and global food supply sector, the IT & digital sector, and the construction & building sector.
