Final European Sustainability Reporting Standards have been adopted

A high-level look at the current reporting issues

On 31 July 2023, the European Commission (EC) adopted the final delegated act of the European Sustainability Reporting Standards (ESRS). The delegated act includes the 12 finalised ESRS, made up of two cross-cutting standards, which apply to all sustainability matters, and ten topical standards covering a wide range of environmental, social and governance matters.

What is the issue?

The ESRS are the sustainability reporting standards that underpin the **Corporate Sustainability Reporting Directive (CSRD)**. The aim of the CSRD, which has been in force since January 2023, is to bring sustainability reporting on par with financial reporting. To achieve this objective, companies must provide relevant, comparable and reliable information on their sustainability-related impacts, risks and opportunities. The ESRS include detailed and standardised disclosure requirements for companies to report on environmental, social and governance matters.

The **delegated act**, including its appendices, is available in all EU Member States' languages. As noted above, the ESRS include two cross-cutting standards that define the general reporting principles and the CSRD fundamental concepts, including double materiality and reporting boundaries, as well as the overarching disclosures that are to be made by all companies in scope of the CSRD. The ten topical standards include the specific reporting requirements for environmental, social and governance matters:

The final ESRS reflect updates to the 12 previous **draft ESRS** that were issued by the EC for public feedback on 9 June 2023. Responses were due by 7 July 2023. The EC received over **600 comments**.

What are the main changes compared to the June 2023 version issued by the EC for public feedback?

The EC included an overview of significant changes compared to the draft ESRS which were handed over to the EC by EFRAG (European Financial Reporting Advisory Group) in November 2022. Based on our preliminary assessment, the changes made after the feedback period in June 2023 include:

- The terminology around financial materiality to align further with the definition of financial materiality in the IFRS sustainability disclosure standards.
- A provision within the materiality section which requires a detailed explanation when a reporting entity concludes that climate change is not a material topic.
- An additional provision to facilitate the compliance of financial markets participants, benchmarks administrators and financial institutions with their own disclosure obligations from other EU law: If the reporting entity concludes that a data point derived from such EU law is not material, it shall explicitly state that the data point in question is "not material".

- A requirement to disclose a table with all data points derived from other EU law, indicating where they are to be found in its sustainability statement or stating “not material” as appropriate.

International interoperability

The EC has stressed the importance of the alignment of the ESRS with global standards such as the IFRS sustainability disclosure standards and the Global Reporting Initiative (GRI). In its [press release](#) about the adoption of the ESRS, the ISSB (International Sustainability Standards Board) confirmed the high degree of alignment between its and the ESRS climate disclosures. Furthermore, interoperability guidance material from the EC, EFRAG and ISSB, which is due out shortly, should assist entities in navigating between the standards and understand where there are incremental or different disclosures required by one of the two sets of standards.

In this respect, EFRAG has recently made available [papers](#) on the interoperability of ESRS with the GRI-standards and the IFRS sustainability disclosure-standards. These papers will be discussed during the 23 August 2023 EFRAG SRB (Sustainability Reporting Board) public session.

Phasing-in and voluntary disclosures

Additional phase-in reliefs and voluntary disclosures introduced in the June 2023 draft ESRS remain substantially unchanged. The additional reliefs are intended to reduce the reporting burden of companies and to facilitate the first-time application of the standards.

Standard	Disclosure Requirement	For all companies	For companies and groups with 5750 employees	
			Year 1	Year 2
 ESRS E1-G3	Anticipated financial effects	Year 1: may be omitted Year 1-2: qualitative information only*		
 ESRS E1	Disclosures on scope 3 and total GHG emissions		May be omitted**	
 ESRS E4	All disclosure requirements		May be omitted**	May be omitted**
 ESRS S1	Selected disclosure requirements and sub-points	Year 1: may be omitted		
 ESRS S1	All disclosure requirements		May be omitted**	
 ESRS S2-S4	All disclosure requirements		May be omitted**	May be omitted**

* The company may choose to disclose the information in the first year only. A total disclosure of the information is required in the second year.

Examples of voluntary disclosures include the transition plan for biodiversity and ecosystems (ESRS E4) and information on non-employee workers in ESRS S1 (for example, with respect to adequate wages, social protection, and health and safety). An explanation of why certain sustainability topics have been classified as not material is also a voluntary disclosure (with the exception of the climate change topic).

What are the next steps?

After the adoption of the delegated act, a two-month scrutiny period (with a possible two months' extension) by the European Parliament and the Council of the European Union will begin. Once the scrutiny period is over and assuming neither of the co-legislators objects, the delegated act will apply from 1 January 2024.

Parallel to the legislative process, EFRAG is working on developing further guidance to support the application of the ESRS. This guidance is expected to cover the materiality assessment and the inclusion of value chain information. In addition, EFRAG has announced that it will put in place an access point for ESRS stakeholders to provide application questions on the ESRS.
